Android updates its operating system regularly to include new features, fix glitches, and make your Android device run more smoothly. The newest version is Android 10, and it offers some great features you'll want to get your hands on. Installing the new OS is not too difficult. Before you install it, you have to make sure your phone is compatible with it and able to receive the latest update, which we can help you with. Then, we'll give you some advice about getting the update. Make sure you have the right phone Julian Chokkattu/Digital Trends Unfortunately, not every Android phone is going to be eligible for the Android 10 update. If your device is over 2 years old, has already received two major Android OS updates, or is a lower-end budget device, you might not be seeing Android 10 at all. We've collected rumors for each of the manufacturers in our Android 10 updates post, so you can check there for the latest news on a variety of devices. However, there are some devices which are a given. All of Google's Pixel phones have already received the update, while the latest flagship phones — like the Samsung Galaxy Note 10 range and Huawei's P30 range — are also highly likely to get the update. You can also safely assume any phone that took part in the Android 10 beta is likely to receive the update. The Android 10 beta program was the largest in Android's history, with an amazing 25 devices from 13 manufacturers taking part. Here's the list of phones that supported the Android 10 beta: Asus ZenFone 5Z Essential Phone Huawei Mate 20 Pro LG G8 ThinQ Nokia 8.1 OnePlus 7 Pro OnePlus 7T OnePlus 6T Oppo Reno Realme 3 Pro Sony Xperia XZ3 Tecno Spark 3 Pro Vivo X27 Vivo Nex S Vivo Nex A Xiaomi Mi 9 Xiaomi Mi Mix 3 5G Google Pixel 3a Google Pixel 3a XL Google Pixel 3 Google Pixel 3 XL Google Pixel Google Pixel XL Back up your data While the final Android 10 build won't be as risky as getting involved in a beta program, it's still a really good idea to backup your Android devices regularly and before committing to the upgrade. Make sure to back up your Android phone to your PC to make sure your precious data is as safe as houses. How to install Android 10 So your phone has been confirmed to be getting the Android 10 update — hurrah! Now what? Well, you may have to wait a while. Some manufacturers take a little while to push the update out, whether it's the speedier companies like Nokia, or the slowpokes of Samsung and LG. That usually comes down to how much work they have to do, and creating manufacturer UIs like Samsung's upcoming One UI 2.0 can take a significant amount of time. Thankfully, when your update is ready, it'll be pushed through to your phone and you'll be prompted to upgrade. You can either upgrade right then and there, or you can choose to have your phone install it at a later time when it's more convenient — you can even have it update overnight. If you're really, really excited about it (like us) then you can manually check to see if the update has come in. To do so, head to Settings > System > Advanced > System update > Check for update. If you're not using a stock Android phone, then your path to finding the updates section may be slightly different — for instance on Samsung phones, you can access Software update directly from the Settings app — but its almost always somewhere in your Settings. That's really all there is to updating to Android 10. Unsure of what's new in the operating system? Check out our Android 10 review. Editors' Recommendations Android smartphone owners can now download a free Skype client from the Android Market that will let them make voice calls over mobile data or Wi-Fi connections — except in the U.S., where it will work over Wi-Fi only. With the new application, smartphone users can make free Skype-to-Skype calls, unless their network operator makes additional charges for data usage. The app will also allow them to communicate using instant messaging and make calls to regular phones for a fee. The app works on smartphones running Android version 2.1 or 2.2. Skype tested it on HTC's Desire and Legend phones, Google's Nexus One, and Motorola's Milestone and Milestone XT710. The application may also work on other Android phones, Skype said, but it won't guarantee full functionality or compatibility. It is aware of some problems with the app on the Samsung Galaxy S, which it will address in the future, it said. Users that have already created a Skype account on a computer will see their full contact list when they sign in to Skype on their Android phone. The app can be downloaded from the Android Market, except in China or Japan, or by directly accessing skype.com/m from a compatible smartphone, Skype said. The company didn't say why U.S. users are only allowed to use Wi-Fi to make Skype calls. Send news tips and comments to mikael_ricknas@idg.com Believe it or not, finding files you've downloaded on your iPhone or Android phone can be tougher than you think. After owning your smartphone for some time, it can quickly become a handheld electronic briefcase. Along with the apps you need to get you through your day, it's packed with photos, videos, files, and other media. While it's all too easy to download a photo or a restaurant menu to your mobile device, when it comes to actually finding where downloads reside on your phone, the opposite is true. It can be difficult to find a particular file amidst heaps of other folders. Worry not! In this guide, we'll explain where to find downloaded files on iPhones and Android phones, including Google Pixel and Samsung devices. We'll show you where to look to find your downloaded media and what to do to access the files. How to find downloads on iPhone If you own an iPhone, go to the Files app to find your downloads. Files can be used to store everything from photos to saved GarageBand songs. If you've downloaded something in the past, you're almost certain to find it there. Here's how: Step 1: On the Home screen, tap Files. Step 2: If you aren't taken immediately to the Browse screen, tap the Browse folder icon at the bottom-right of the screen. Within Browse you'll see several options listed under Locations. Choose one of the next three steps (3, 4, or 5): Step 3: Cloud: Tap iCloud, Google Drive, Dropbox, Amazon Drive, or any other cloud-based to access files stored in those accounts. Step 4: Local: Tap On My Phone to see all files downloaded to your device. Step 5: Recently Deleted: Open this folder to search for any files you may have accidentally deleted. Step 6: Tap Cloud Drive. Step 7: Tap Downloads on the following screen. If you still can't find what you're looking for, you can tap the search bar and enter the name of your downloaded file. If you can't remember the exact name, you can type the first few letters, which prompts the app to suggest likely candidates. How to find downloads on Samsung phones For Samsung smartphones, much the same principle applies, but with slightly different names. Step 1: Open the app drawer and either tap the My Files icon or open the Samsung folder and access it from there (depending on the phone). Step 2: Under Categories, tap Downloads. Note: The My Files app provides other categories as well that separate files into types: Images, Videos, Audio, Documents and Installation Files. Check these categories if you can't find your file(s) using the Downloads category. Step 3: You can also use the Search field on the app drawer to locate a specific download. How to find downloads on Google Pixel phones Technically, these steps apply to Google's Files app that can be used on any Android phone, not just the Google Pixel series. Step 1: Open the app drawer and tap the Files app. Step 2: The Clean tab opens by default. Scroll down and tap the Downloaded Files card. Alternatively, tap the Browse tab at the app's bottom followed by Downloads on the following screen. Both lead to the same location. Step 3: On the Downloads screen, you can switch between Thumbnail and List views. Next to this button is a three-dot "More" icon presenting a drop-down menu with Sort By and Select All options. In online forums, a small minority of Google Pixel owners have reported an inability to find downloaded photos or files in the Files app. Usually, this is the result of a permissions problem stemming from using the Google app to download images. Step 4: To solve it, go to Settings > Apps > Google > Permissions. Step 5: Next, make sure Storage permission is switched on. If it isn't, downloaded files will continue to be sent to a separate system directory. How to find downloads on Android phones Finding downloads on other Android phones follows pretty much the same workflow as finding them on Google Pixel or Samsung phones. However, depending on the models and manufacturers involved, the app name may differ. As a rule of thumb, you need to do the following: Step 1: Open your app drawer. Step 2: Open the file manager on your phone, which will be named something along the lines of Downloads, File Manager, or My Files. Step 3: Select the Downloads file folder. Note: If you can't see your Downloads, first navigate to Internal Storage, and then you will be able to access the appropriate folder. You can also use the search bar to quickly bring up the file you're looking for or check to see if you accidentally sorted it into another folder. Don't forget third-party apps Downloading files from an app might mean that the files are saved to that app's home folder instead of to the Downloads folder. Netflix is a frequent example of this. Step 1: To find Netflix downloads, open the Netflix app. Step 2: Tap the Menu icon in the top right corner of your screen, and select My Downloads. This could also apply to other apps on your iPhone or Android device. If you used a particular app to download a specific file, try checking within that application to access the file. This should be the method you try if you can't find the file in the standard download folder as well. Editors' Recommendations
